LevelBlue

CASE STUDY

PGA of America partners with LevelBlue to protect golf's biggest events

PGA of America is the steward of golf's largest events, including the PGA Championship and the Ryder Cup. It is also an enterprise with the same security needs as any large organization, and a profile that rises every time a championship tees off. This case study highlights how PGA of America works with LevelBlue, its Official Cybersecurity Advisor, to protect the national organization, its 41 section offices, and the PGA professionals at the heart of the game.

The challenge

Behind every golf championship is an organization running day-to-day operations, protecting fan data. PGA of America's technology setup is different from most companies, and it doesn't have the internal resources to run security at the level it needs. That pressure peaks during the PGA Championship and the Ryder Cup as everything gets magnified.

The solution

PGA of America chose LevelBlue as its cybersecurity advisor. LevelBlue delivers enterprise-level services to the national organization and all 41 section offices, including security operations center (SOC) monitoring and virtual CISO guidance. LevelBlue also makes versions of these services available to individual PGA professionals, extending protection to the people who bring the game to life for golfers everywhere.

The result

Partnering with LevelBlue gives PGA of America the security expertise it couldn't build on its own and an advisor to help lead them into the future. LevelBlue brings new ideas, a full view of the threat landscape, and guidance every step of the way, so the organization can respond with confidence.

"As the stewards of the largest events in golf, including the PGA Championship and the Ryder Cup, we need a top-tier cybersecurity advisor, and we found that with LevelBlue."

Kevin J. Scott, CTO, PGA of America
