

SOLUTION BRIEF / MAY 2024

Get Exponential Protection Across Your Business and Strengthen Cyber Resilience

LevelBlue + SentinelOne: Better Together

LevelBlue and SentinelOne are collaborating to extend detection and response across the environment—from the endpoint to the hybrid network—and every connection in between.

As one of the world's leading security service providers,¹ LevelBlue has been trusted with providing cybersecurity consulting and managed security services to multinational enterprises, regional businesses, and government entities for more than three decades.²

LevelBlue's alliance with SentinelOne boosts the efficacy of your security operations by bringing together two world-class technology platforms.

“LevelBlue is among the innovation leaders in the Americas, thanks to a broad portfolio that includes cutting-edge managed security solutions and varied consulting services.”*

All the support you need in one place

One smooth, simplified customer experience

Security analysts can monitor and manage your hybrid network and endpoints (e.g., laptops, servers, Kubernetes containers) with the LevelBlue USM Anywhere and SentinelOne Singularity platforms in one view, giving you a single point of contact across the two technology stacks.

World-class technology

The USM Anywhere™ open XDR platform delivers holistic threat detection, incident response, and compliance management.

USM Anywhere continuously monitors for threats, collecting data that is enriched by threat intelligence from LevelBlue Labs and LevelBlue Labs Open Threat

Exchange (OTX). The SentinelOne platform ingests threat intelligence from SentinelOne Deep Visibility. The USM Anywhere platform's integration ecosystem extends its security capabilities to more than 600 third-party security and productivity tools.

The deep integration between the two platforms means greater visibility for faster, more efficient detection and response. Security analysts can respond to all alarms directly from USM Anywhere. All information is propagated to the SentinelOne platform—if an alarm is closed in USM Anywhere, it is also closed in SentinelOne, and the SentinelOne platform can be queried directly from USM Anywhere.

Better together

More data, better visibility

- USM Anywhere collects and correlates data from across on-premises and multi-cloud environments
- SentinelOne endpoint data is ingested directly into USM Anywhere
- One centralized view of assets and threats

LevelBlue/Labs

Improved analytics

- Threat intelligence from LevelBlue Labs and OTX is fed into both platforms to enhance detections
- Both platforms align to the MITRE ATT&CK® framework

Improved response actions

- USM Anywhere Advanced BlueApp integrations enable response actions from an ecosystem of security and IT tools
- Orchestrated responses to SentinelOne detections directly from USM Anywhere

Continuous tactical threat intelligence

LevelBlue Labs has visibility into multiple sources of threat data. LevelBlue Labs also receives intelligence from the award-winning³ OTX, which hosts a community of more than 235,000 security professionals submitting over 20 million threat indicators a day.

Because this service is built on the USM Anywhere platform, SentinelOne alerts are enriched by the same threat intelligence from LevelBlue Labs and OTX that is fed into USM Anywhere. This includes information about device identity, geolocation, associations with known threat actor infrastructure and malware families, and other intelligence. Additionally, both platforms map to the MITRE ATT&CK framework.

Visibility, analytics, and AI-driven detection and response across your network and on the endpoint

SentinelOne agents installed on all your endpoints combine powerful endpoint protection with real-time detection and response, leveraging static and behavioral artificial intelligence (AI) models to protect against the most advanced malware and ransomware threats.

SentinelOne Storyline™ technology provides actionable context, allowing analysts to quickly connect the dots by automatically linking all related events and activities into one view. Each agent starts protecting as soon as it is deployed (even when offline), and all alerts are ingested directly into the USM Anywhere platform. USM Anywhere uses AI to enhance detections, so threats across your network can be detected and identified faster and more accurately.

The robust SentinelOne Advanced BlueApp integration into the USM Anywhere platform provides a range of orchestrated response actions that security analysts can take to respond to threats in real time. SentinelOne's automated and one-click rollback capability automatically restores files to a previously known-good state, simplifying ransomware response and slashing mean time to respond (MTTR).

“Cyber attackers are using sophisticated AI-driven techniques to unleash devastating attacks. SentinelOne has recognized the need to complement human skills with greater automation and more intelligence-based pre processing in order to assist security teams with their often onerous workloads.”

About LevelBlue

We simplify cybersecurity through award-winning managed security services, experienced strategic consulting, threat intelligence and renowned research. Our team is a seamless extension of yours, providing transparency and visibility into security posture and continuously working to strengthen it.

We harness security data from numerous sources and enrich it with artificial intelligence to deliver real-time threat intelligence. This enables more accurate and precise decision making. With a large, always-on global presence, LevelBlue sets the standard for cybersecurity today and tomorrow. We easily and effectively manage risk, so you can focus on your business.

Cybersecurity. Simplified.
