

Microsoft Sentinel Workshop Offered by LevelBlue

Gain a bird's eye view across your enterprise with SIEM for a modern world.

"With everything running through Azure Sentinel, we've reduced the time spent on case management and resolution of alerts by approximately 50 percent".

-Stuart Gregg, Cyber Security Operations Lead, ASOS

As IT becomes more strategic, the importance of security grows daily. Security information and event management (SIEM) solutions built for yesterday's environments struggle to keep pace with today's challenges—let alone tomorrow's unimagined risks.

That's why Microsoft developed Microsoft Sentinel, a fully cloud-native SIEM.

See and stop threats before they cause harm with a Microsoft Sentinel Workshop

Microsoft Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for alert detection, threat visibility, proactive hunting, and threat response.

Get an overview of Microsoft Sentinel along with insights on active threats to your Microsoft 365 cloud and on-premises environments with a Microsoft Sentinel Workshop offered by LevelBlue.

Choose the approach that's best for you

Every organization is different, so this workshop can be customized to fit your environment and goals. We can provide either of two scenarios:

Remote Monitoring

If your organization doesn't have its own security operations center (SOC) or if you want to offload some monitoring tasks, we will demonstrate how LevelBlue can perform remote monitoring and threat hunting for you.

Joint Threat Exploration

If your organization is interested in learning how to integrate Microsoft Sentinel in your existing SOC by replacing or augmenting an existing SIEM, we will work with your SecOps team and provide additional readiness to bring them up to speed.

Workshop highlights

- Understand the features and benefits of Microsoft Sentinel
- Gain visibility into threats across email, identity, and data
- Better understand, prioritize, and mitigate potential threat vectors
- Create a defined deployment roadmap based on your environment and goals
- Develop joint plans and next steps

Workshop objectives

Through this workshop, we will work with you to:

- Discover threats to your Microsoft 365 cloud and on-premises environments across email, identity, and data.
- Understand how to mitigate threats by showing how Microsoft 365 and Azure security products can help mitigate and protect against threats that are found.
- Plan next steps and provide information to build a business case for a production deployment of Microsoft Sentinel including a technical deployment roadmap.

In addition, depending on the selected scenario, you will also:

- Experience the benefits of a managed SIEM with a true cloud native SIEM, managed and monitored by our cybersecurity experts.
- Receive hands-on experience, learn how to discover and analyze threats using Microsoft Sentinel and how to automate your Security Operations to make it more effective.

What we'll do

- Analyze your requirements and priorities for a SIEM deployment
- Define scope and deploy Microsoft Sentinel in your production environment
- Remote monitoring* and proactive threat hunting to discover attack indicators
- Discover threats and demonstrate how to automate responses
- Recommend next steps on how to proceed with a production implementation of Microsoft Sentinel

Why LevelBlue?

When it comes to security, you need an experienced partner.

As an end-to-end cybersecurity provider, LevelBlue experts will help you with strategic initiatives, tactical implementations, and emergency response. Our goal is to provide you with layered security, reduce risks and maximize your security and Microsoft investments. We work to enhance your team and leverage deep cybersecurity acumen to help you realize the full power of your Microsoft environment.

LevelBlue services to compliment your Microsoft/Azure environment and support your cybersecurity needs

- Co-Managed SOC for Microsoft Sentinel
- Managed Detection and Response for Microsoft Security
- Consulting and Professional Services
- Database and Email Security
- Penetration Testing
