

LevelBlue

PRODUCT BRIEF

LevelBlue USM Central

Centralized Security Monitoring for Multiple
LevelBlue USM Anywhere Deployments

USM Central™ enables you to centrally monitor multiple USM Anywhere™ deployments through a single console.

Whether you're looking to monitor multiple end customer environments as a Managed Service Provider (MSP) or a Managed Security Service Provider (MSSP), or to monitor distributed IT environments across your enterprise, LevelBlue USM Central gives you the centralized visibility you need to efficiently work to detect and respond to threats across all of your environments.

As part of a federated USM deployment, USM Central enables you to:

- Centrally monitor security activity across multiple USM deployments, helping to save significant time and resources in managing multiple security environments.
- Deploy LevelBlue USM Anywhere to monitor your cloud, on-premises, and hybrid IT environments, as well as cloud applications like Office 365 and Google Workspace, giving you complete threat detection coverage without having to sacrifice centralized monitoring.
- Instantly click-through into individual USM deployments from USM Central to investigate and rapidly respond to security incidents.

Centralized Insight into Alarms, Vulnerabilities, and Configuration Issues

USM Central enables the centralized review of alarms, discovered vulnerabilities, and configuration issues from any connected USM deployment, all through a single web console. It makes it easy and efficient to independently monitor multiple IT environments, helping to save you time and resources.

Federated Monitoring of Multiple USM Anywhere Deployments

USM Central delivers central, federated monitoring of USM Anywhere deployments. This helps save time and resources, while improving your ability to efficiently monitor multiple deployments.

Hosted and Highly Secured

USM Central is a modern, scalable cloud service that is hosted, maintained, and highly secured by LevelBlue. This eliminates your burden of having to deploy, maintain, update, and protect on-premises federated monitoring software, helping to save you time, money, and resources. Plus, as a cloud-based service, USM Central can be deployed rapidly and easily scales as your business grows.

Click-Through Alarm Investigation

USM Central allows you to drill down into the specific alarms you want to investigate within the end customer's USM deployment without having to log in to a separate window and reference or navigate back to the alarm you want to investigate.

Custom Data Views and Reporting

USM Central utilizes powerful search and analysis capabilities, customization of views for alarms and events, and the export of graphically-rich views into a CSV or HTML report. This helps to simplify analysis of multiple distinct environments, and the creation of executive-ready reports with rich data visualization elements.

Data Privacy and Compliance

USM Central has been attested as compliant to PCI DSS, SOC 2, and helps to support HIPAA regulatory compliance.

Deploying USM Central is Fast and Easy

USM Central is a cloud-based service hosted by LevelBlue. It is fast and easy to deploy, accessible from virtually anywhere, readily scalable, and helps to significantly reduce the costs of centrally monitoring multiple deployments or end customer environments.

Fast and Easy to Deploy

New and existing USM deployments can be connected to USM Central as soon as installation is complete, significantly accelerating your time to full operation and monitoring multiple environments.

Accessible from Virtually Anywhere

Because USM Central is a SaaS-delivered service, all you need is a web browser to connect to the USM Central console to start monitoring multiple USM deployments.

Helps Reduce the Cost of Monitoring Multiple Customers and Environments

USM Central helps to remove the costs and burden associated with having to protect and continuously update an on-premises hardware or software solution. As a cloud-based service, LevelBlue provides for the uptime and protection of USM Central, helping to allow you to focus solely on monitoring and protecting your customer environments.

About LevelBlue

We simplify cybersecurity through award-winning managed security services, experienced strategic consulting, threat intelligence and renowned research. Our team is a seamless extension of yours, providing transparency and visibility into security posture and continuously working to strengthen it.

We harness security data from numerous sources and enrich it with artificial intelligence to deliver real-time threat intelligence. This enables more accurate and precise decision making. With a large, always-on global presence, LevelBlue sets the standard for cybersecurity today and tomorrow. We easily and effectively manage risk, so you can focus on your business.

Cybersecurity. Simplified.
