WAAP Sprawl and Security Fragmentation:

Web application environments continue to grow in scale and complexity. To protect them, organizations are challenged with managing multiple security solutions.

How is your fragmented WAAP stack affecting your security and driving up costs as API usage surges?

The Rise

Application environments are scaling up:

The average organization expects to support 201 web apps soon – up from 145 today.

And 80% of those apps will rely heavily on APIs.

The Sprawl

Organizations are juggling multiple WAAP tools:

Use multiple WAFs

Rely on different DDoS providers for L3/L4 & L7

Manage two types of bot protection systems

The Shift

Security teams are prioritizing consolidation:

91%

WAF consolidation is a priority

44%

Plan to act in 12 - 24 months

94%

Expect budgets to rise to support these moves

The Budget

WAAP security spending priorities are varied:

18% 32% **Bot Management API Protection** 24% **WAF Enhancements** 26%

DDoS Mitigation
